

AMENDMENTS TO THE SPECIFICATION:

Replace the paragraph at page 3, beginning at line 22, with the following amended paragraph:

However, for a MS 100 in the Idle state there is no corresponding RP session. A data session needs to be initiated by the MS ~~[[10-0]]100~~ and, at present, there is no defined way for the network 20 to initiate the session set up. As such, it can be appreciated that one of the problems that arise in a network-initiated session set up is to locate the MS 100 in the network 20.

Replace the paragraph at page 3, beginning at line 22, with the following amended paragraph:

The MS 100 also contains a wireless section that includes a digital signal processor (DSP) 180, or equivalent high speed processor or logic, as well as a wireless transceiver that includes a transmitter ~~200-210~~ and a receiver 220, both of which are coupled to an antenna 240 for communication with the network operator. At least one local oscillator, such as a frequency synthesizer (SYNTH) 260, is provided for tuning the transceiver. Data, such as digitized voice and packet data, as well as signalling messages are transmitted and received through the antenna 240.
